

Hands-on Introduction to XML

XML Summer School September 2010

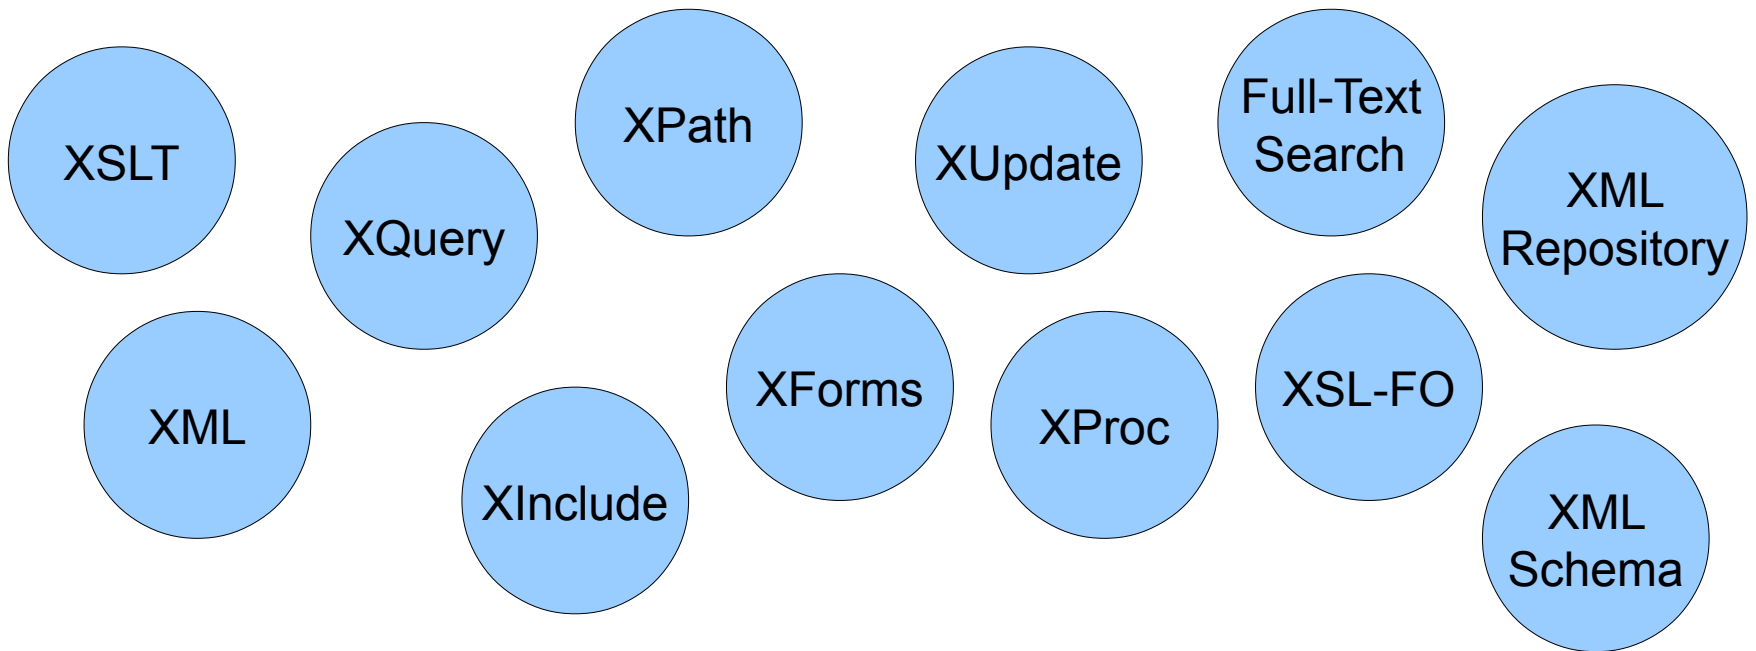

` Putting it all together `

Adam Retter

eXist Solutions

Putting it all together

How to use these together?

1. XProc?

Pluggable, but perhaps limited to single docs

2. Bespoke code?

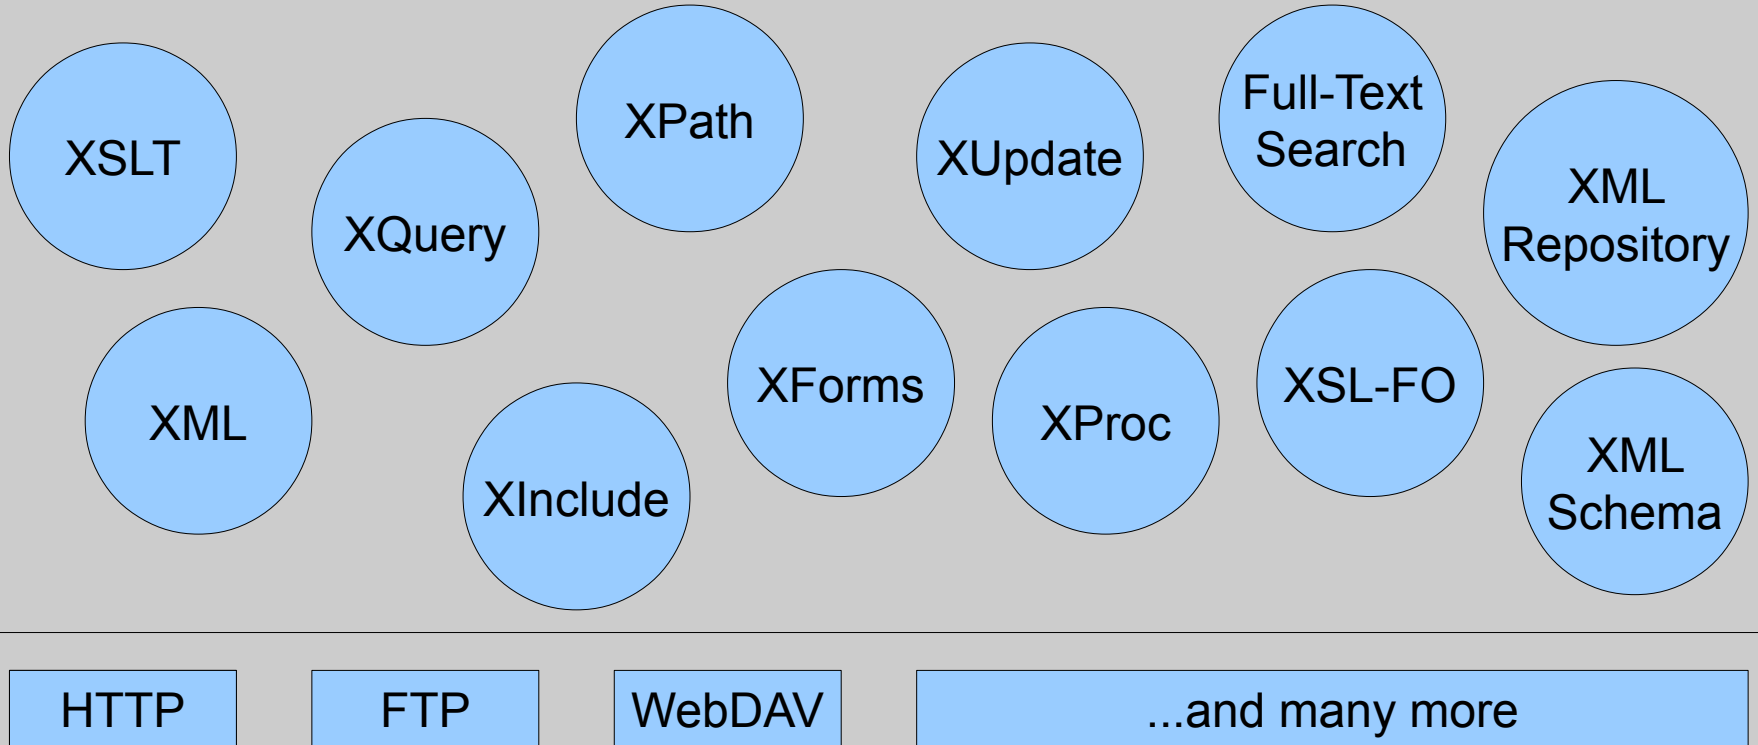

Take various Processors and glue them together.
Time consuming!

3. XML Application Server?

Build entire applications using XML technologies!

Putting it all together

XML Application Server

Reflections on XML Applications

- Use the right tool for the right job!
 - Dont just stick to XQuery or XSLT
 - Each has its appropriate place
 - Code smells / Time and Efficiency
- Security – what are you exposing as XML?
- Dont become religious about Native XMLDBs
 - Relational & KV databases still have their place!
 - The two can be used in conjunction
- Do *not* forget Good Design!!!
 - W3C Standards / MVC / Separation of Concerns / Testing

XML Application Servers

- Typically these are Native XML Database++
- Come in different shapes and sizes
- Open Source and Commercial
 - eXist-db, MarkLogic, X-Hive etc...
- Disclosure ;-)

Open Source Native XML Database
